

# Lecture 1&2 Asymtotic Notation

## ▼ Algorithm Analysis

### ▼ Primary interest

#### ▼ Time Complexity

##### ▼ Big O Notation

- Gives an upper bound on the growth rate of a function

### ▼ Secondary interest

#### ▼ Space Complexity

- A measure of the amount of working storage an algorithm needs
- How much memory the algorithm needs

## ▼ Primitive Operations

- Single addition
- Multiplication
- Comparison

## ▼ Common Functions

### ▼ Constant

- $O(1)$

### ▼ Logarithmic

- $O(\log n)$

### ▼ Linear

- $O(n)$

### ▼ Log-linear

- $O(n \log n)$

### ▼ Quadratic

- $O(n^2)$

### ▼ Cubic

- $O(n^3)$

### ▼ Polynomial

- $O(n^k)$

### ▼ Exponential

- $O(a^n)$ ,  $a > 1$

### ▼ Factorial

- $O(n!)$

## ▼ Big Omega and Theta Notation

### ▼ Big O

- $f(n)$  is  $O(g(n))$  if  $f(n)$  is asymptotically less than or equal to  $g(n)$

### ▼ Big Omega

- $f(n)$  is  $\Omega(g(n))$  if  $f(n)$  is asymptotically greater than or equal to  $g(n)$

### ▼ Big Theta

- $f(n)$  is  $\Theta(g(n))$  if  $f(n)$  is asymptotically equal to  $g(n)$
